- If $\geq 25\%$ of the properties included in the blanket are condominiums, 2-4 units or a combination of both, a Single Loan Variance (SLV) and pre-close pricing exception will be required
- Different property types can be collateralized together. Pricing and eligibility based on the most restrictive property type of all within the cross.
- Cannot use FNMA/FHLMC Notes and/or Security Agreements
- If $>25\%$ of the properties included in the blanket have individual DSCR's between 0.75 and 0.99 DSCR, then the maximum LTV must be reduced by 10%
 - o The individual property DSCR's should be calculated using only a portion of the P&I on the new loan. The portion of the P&I that should be used is allocated based on the value of the property as compared to the total value of all properties being secured in the blanket. See the calculation example below:
 - o Assumptions:
 - The blanket loan is going to be secured by seven properties
 - The P&I on the new loan is \$2500
 - We're going to calculate the individual DSCR on property #4
 - Monthly taxes, insurance and association fees for property #4 are \$1200
 - Monthly gross rental income on property #4 is \$1700

Step 1: Determine allocation percentage for each property by comparing the individual appraised value to the total of all appraised values in the blanket. As an example, for property #4, the allocation percentage is calculated using \$200,000 divided by \$800,000 = 25%

Property	Appraised Value	Allocation Based on Total Appraised Values
1	\$100,000	12.5%
2	\$100,000	12.5%
3	\$100,000	12.5%
4	\$200,000	25.0%
5	\$100,000	12.5%
6	\$100,000	12.5%
7	\$100,000	12.5%
Total	\$800,000	100%

Step 2: Determine the amount of the new P&I that should be used to calculate the individual DSCR on property #4

Total P&I of the new loan multiplied by the allocation percentage for property #4. $\$2500 \times 25\% = \mathbf{\$625}$

Step 3: Add the individual property's monthly TIA (taxes, insurance, association fees) to the allocated P&I. $\$625 + \$1200 = \mathbf{\$1825}$

Step 4: Calculate the individual DSCR for property #4 by taking gross monthly rent divided by the allocated PITIA. $\$1700 \text{ divided by } \$1825 = \mathbf{.93}$

Step 5: Repeat the calculation to determine each property's individual DSCR and then determine if $>25\%$ of the properties in the blanket have individual DSCRs between .75 and .99. If so, then the LTV must be reduced by 10%

Release Prices	Blanket/multiple property loans may permit partial releases at a release price equal to at least 120% of the allocated loan amount for each property. Allocated loan amounts must be determined proportional to the appraised values of each property
